GAURAVJEET SINGH

SOFTWARE ENGINEER / FULL STACK & AI PRODUCT DEVELOPMENT

gau94rav@gmail.com **+91 98720 82415**

LinkedIn **GitHub** **Interactive portfolio**

Software engineer with **7+ years of professional experience** building backend services, full-stack applications, and security analytics platforms. Experienced in Python, Vue.js, and data-intensive products at Snyk and Topcoat. Now applying that foundation to **Vuln Lens**, **AI-assisted mobile game development**, and an AI usage risk assessment project.

PROFESSIONAL EXPERIENCE

Snyk

Mar 2022 - Jun 2026

Software Engineer

- Built security analytics dashboards for vulnerability exploration, issue summaries, CVE, CWE, and zero-day reporting.
- Developed Python backend services and REST APIs for reporting, data retrieval, filtering, and customer-facing workflows.
- Delivered the backend for the **Reporting Export API**, enabling exports of large security reporting datasets; integrated Vue.js, Snowflake, and PostgreSQL across reporting features.
- Collaborated across frontend, backend, and data engineering; contributed to technical interviews and engineer onboarding.

Topcoat

Oct 2021 - Mar 2022

Software Engineer

- Built a browser-based reporting IDE using **Vue.js and Monaco Editor**, enabling customers to create custom analytics pages with SQL and Vue code.
- Developed context-aware autocomplete for SQL and Vue, plus Python APIs and Snowflake-backed reporting experiences.
- Contributed to the reporting platform prior to its acquisition by Snyk.

Canvas Craft Media

Mar 2019 - Oct 2021

Full Stack Developer

- Delivered **10+ bespoke web applications** for international clients across e-commerce, media, automation, and business workflows.
- Built Python scraping and automation solutions, video hosting applications, and an Electron job/activity tracker.
- Worked directly with clients to define requirements and deliver features across frontend and backend layers.

Independent development

2015 - 2019

Freelance Developer & Self-directed Learning

- Built responsive websites and custom applications for local businesses and individual clients using HTML, CSS, JavaScript, PHP, and Node.js.
- Translated Figma designs into production interfaces; contributed to open source and participated in coding camps and workshops.

CURRENT WORK

Independent projects / AI-assisted product development

SELECTED PROJECTS

Vuln Lens

Independent project

DevSecOps vulnerability analytics | Backend engineering
vuln-lens.vercel.app

- Built the API and processing backend that turns security scan results into normalized vulnerability records for prioritization, tracking, and remediation across repositories.
- Implemented **SARIF ingestion** through uploads, webhooks, and GitHub Actions, with adapters for Trivy, CodeQL, Semgrep, and Snyk; grouped related findings and preserved triage decisions and issue history.
- Supported filtered dashboards, repository summaries, remediation trends, notifications, and CSV/PDF exports, alongside authentication and project-scoped data.
- Integrated a GitHub App for repository synchronization and scanning-workflow pull requests; added optional AI summaries and remediation PR jobs using background workers.

Stack: Python, FastAPI, SQLAlchemy, PostgreSQL, Celery, Redis, Docker Compose. **Scope:** API and processing backend; frontend maintained separately.

Hopworlds

Planned: iOS & Android, Q4 2026

Mobile arcade adventure | AI-assisted game development

- Producing a **Godot** mobile arcade adventure with AI tools, combining slingshot launches, evolving worlds, power-ups, boss battles, and a flying companion.
- Developing Campaign, Arcade, and Zen modes with touch and motion controls across jungle, space, and sewer environments.
- Building a custom **Theme Studio** connecting artwork, animation, and audio to shared gameplay systems.

Focus: Godot, mobile game development, AI-assisted production, gameplay systems, and reusable themes.

AI usage risk assessment

In development

Insurance technology | Product development

Working on a project that helps insurance companies assess their customers' use of AI and the associated risks. Bringing full-stack engineering experience and extensive use of AI tools to product development.

TECHNICAL SKILLS

Backend & data Python, FastAPI, Django, Flask, Node.js, SQLAlchemy, SQL, PostgreSQL, Snowflake, Redis, Celery.

Frontend & products Vue.js, JavaScript, TypeScript, React, HTML, CSS, Monaco Editor; Godot for mobile games.

Engineering practice REST APIs, data aggregation, reporting and exports, Docker, Git, code review, debugging, technical interviews, onboarding, and cross-functional delivery.
